EXHIBIT BV

Sonos's Claim Chart U.S. Patent No. 9,942,215

Claim: 8	Google Chromecast-Enabled Audio Players
A playback device,	Google's line of Chromecast-enabled audio players includes, inter alia, the Google Home Mini, the
comprising:	Google Home, the Google Home Max, the Google Home Hub, and the Chromecast dongles, and these
	Chromecast-enabled audio players are controlled by smartphones, tablets, and computers installed with
	the Google Home app, the Google Play Music app, and/or other Chromecast-enabled apps (where a
	computing device installed with at least one of these apps is referred to herein as a "Chromecast-
	enabled computing device"). Each of the foregoing Chromecast-enabled audio players comprises a
	"playback device" as recited in claim 8, and Google's Cloud Platform comprises a "computing system"
	that is "remote from the playback device" as recited in claim 8. See, e.g.,
	https://developers.google.com/cast/docs/caf_receiver/;
	https://developers.google.com/cast/docs/caf_receiver/queuing;
	https://developers.google.com/cast/docs/reference/caf_receiver/cast.framework.QueueBase.
a network interface;	Each of the foregoing Chromecast-enabled audio players includes a network interface configured to
	interface the Chromecast-enabled audio player with a data network, such as a WiFi interface. See, e.g.,
	https://store.google.com/us/category/connected_home?hl=en-US;
	https://support.google.com/googlehome/answer/7072284?hl=en;
	https://www.ifixit.com/Teardown/Google+Home+Teardown/72684.
at least one processor; and	Each of the foregoing Chromecast-enabled audio players includes at least one processor. See, e.g.,
	https://store.google.com/us/category/connected_home?hl=en-US;
	https://support.google.com/googlehome/answer/7072284?hl=en;
	https://www.ifixit.com/Teardown/Google+Home+Teardown/72684.
memory storing instructions	Each of the foregoing Chromecast-enabled audio players includes a memory comprising executable
that when executed by the at	instructions that enable the Chromecast-enabled audio players to perform the functions identified
least one processor cause	below. See, e.g., https://store.google.com/us/category/connected_home?hl=en-US ;
the playback device to	https://support.google.com/googlehome/answer/7072284?hl=en;
perform a method	https://www.ifixit.com/Teardown/Google+Home+Teardown/72684.
comprising:	
causing a currently playing	Each of the foregoing Chromecast-enabled audio players include program instructions that, when
media item to change from	executed by the player's at least one processor, cause the Chromecast-enabled audio player to cause a
corresponding to a first	currently playing media item to change from corresponding to a first media item to corresponding to a
media item to	second media item.
corresponding to a second	
media item;	For instance, each of the foregoing Chromecast-enabled audio players is programmed with the
	capability to (i) play back an audio track from a local queue that is associated with a cloud queue and
	(ii) cause the audio track currently being played by the Chromecast-enabled audio player to change

Sonos's Claim Chart U.S. Patent No. 9,942,215

	from a first audio track identified in the local queue to a second audio track identified in the local queue in responses to various triggering events, including but not limited to a determination that the first audio track has ended or a command from a Chromecast-enabled computing device. <i>See</i> , <i>e.g.</i> , https://developers.google.com/cast/docs/caf_receiver/cast.framework.QueueBase; ; https://developers.google.com/cast/docs/reference/caf_receiver/cast.framework.QueueManager; ; https://developers.google.com/cast/docs/reference/caf_receiver/cast.framework.messages.QueueItem; ; https://developers.google.com/cast/docs/reference/caf_receiver/cast.framework.messages.QueueData; ; https://developers.google.com/cast/docs/reference/caf_receiver/cast.framework.messages.QueueData; ; https://developers.google.com/cast/docs/reference/caf_receiver/cast.framework.messages.QueueData; ; https://developers.google.com/cast/docs/reference/caf_receiver/cast.framework.messages.QueueData; https://developers.google.com/cast/docs/reference/caf_receiver/cast.framework.messages.QueueData;
after causing the currently playing media item to change, transmitting, to a computing system over a network interface, (i) a request for an indication of media items from a cloud queue of media items stored remote from the playback device, wherein the computing system is remote from the playback device and (ii) an indication of the second media item;	Each of the foregoing Chromecast-enabled audio players include program instructions that, when executed by the player's at least one processor, cause the Chromecast-enabled audio player to, after causing the currently playing media item to change, transmit to Google's Cloud Platform, (i) a request for an indication of media items from a cloud queue of media items stored remote from the Chromecast-enabled audio player (e.g., at Google's Cloud Platform), and (ii) an indication of the second media item. For instance, each of the foregoing Chromecast-enabled audio players is programmed such that, after causing the audio track currently being played by the Chromecast-enabled audio player to change from a first audio track to a second audio track identified in a local queue of the player that is associated with a Google-hosted cloud queue, the Chromecast-enabled audio player is capable of sending Google's Cloud Platform (i) a request for an indication of audio tracks identified in the Google-hosted cloud queue and (ii) an indication of the second audio track that is currently being played back by the Chromecast-enabled audio player. See, e.g., https://developers.google.com/cast/docs/caf_receiver/cast.framework.QueueBase; https://developers.google.com/cast/docs/reference/caf_receiver/cast.framework.QueueManager; https://developers.google.com/cast/docs/reference/caf_receiver/cast.framework.messages.QueueData; https://developers.google.com/cast/docs/reference/caf_receiver/cast.framework.messages.QueueData; https://d
receiving, from the computing system over the network interface,	Each of the foregoing Chromecast-enabled audio players include program instructions that, when executed by the player's at least one processor, cause the Chromecast-enabled audio player to receive,

Sonos's Claim Chart U.S. Patent No. 9,942,215

information identifying two or more media items from the cloud queue of media items, wherein the two or more media items comprise the second media item; and from Google's Cloud Platform, information identifying two or more media items from the cloud queue, wherein the two or more songs comprise the second media item.

For instance, each of the foregoing Chromecast-enabled audio players is programmed such that, after causing the audio track currently being played by the Chromecast-enabled audio player to change from a first audio track to a second audio track identified in a local queue of the player that is associated with a Google-hosted cloud queue, the Chromecast-enabled audio player is capable of receiving information from Google's Cloud Platform that identifies a window of audio tracks from the Google-hosted cloud queue that includes the second audio track currently being played back by the Chromecast-enabled audio player. *See, e.g.*, https://developers.google.com/cast/docs/caf_receiver/gueuing;; https://developers.google.com/cast/docs/reference/caf_receiver/cast.framework.QueueManager;; https://developers.google.com/cast/docs/reference/caf_receiver/cast.framework.messages.QueueItem;; https://developers.google.com/cast/docs/reference/caf_receiver/cast.framework.messages.QueueData;; https://developers.google.com/cast/docs/reference/caf_receiver/cast.framework.messages.QueueData; https://developers.google.com/cast/docs/reference/caf_receiver/cast.framework.messages.QueueLoadRequestData.

incorporating at least one of the two or more media items in a local queue of media items stored on the playback device. Each of the foregoing Chromecast-enabled audio players include program instructions that, when executed by the player's at least one processor, cause the Chromecast-enabled audio player to incorporate at least one of the two or more media items in a local queue of media items stored on the Chromecast-enabled audio device.

For instance, each of the foregoing Chromecast-enabled audio players is programmed such that, in response to receiving information from Google's Cloud Platform that identifies a window of audio tracks from a Google-hosted cloud queue with which a local queue of the player is associated, the Chromecast-enabled audio player updates the local queue to incorporate at least one of the identified audio tracks. *See, e.g.*, https://developers.google.com/cast/docs/caf_receiver/cast/docs/caf_receiver/cast.framework.QueueBase;
https://developers.google.com/cast/docs/reference/caf_receiver/cast.framework.QueueManager;
